

# Virtual Telephone Number

Stay Connected Everywhere

## Virtual Telephone Number (VTN)

Virtual Telephone Number (VTN) is a phone number that resides in the cloud. Choose from local numbers that can be re-routed to your cell phone, home phone and office phone so you always stay connected. VTN provides a low-cost nationwide business presence since you don't have to physically be where the number points so both you and your customers enjoy greater savings and convenience.

### Why businesses love Virtual Telephone Numbers:

#### Save Money

VTN gives you all the benefits without the high costs typically associated with Remote Call Forwarding. VTN can be added to both basic telephone service and VoIP solutions.

#### When Opportunity Knocks, Someone Always Answers

Your office road warriors can re-route their calls or set up Simultaneous Ring and have their calls ring at up to 10 devices when they are on the road. Now they are always connected and opportunities don't slip through the cracks.

#### Customer Savings and Loyalty

A VTN ensures your customers have a local phone number to call.

#### Expansion Without the Cost

Get a local number and redirect it to the corporate office. Now you don't have the expenses and problems associated with having a traditional brick and mortar presence

### How does it work?

Point. Click. Reroute.

Your VTN options can be managed anywhere an Internet connection is available via your Digital Voice toolbar. Change the call forwarding numbers, Find Me/Follow Me settings or set up simultaneous or sequential ring quickly and easily 24x7.
