Shared Call Paths
Optimize your communications expense

Shared Call Paths

In a traditional Cloud UC solution, every phone you lease comes with a dedicated line, or call path, and that line is always available even when you're not on the phone. What if you could share that dedicated line with several phones, or even over several locations, and only pay for what your business truly needs?

Why businesses love Shared Call Paths

Significantly Reduced Costs
You may only need one call path for every 3, 4 or more employees. That means you don't really need to purchase a hosted seat for every user, which can cut your costs significantly

Bursting
If volume exceeds the number of concurrent call paths, bursting lets those calls go through

Re-allocation of Your Resources
Utilize these savings to address other IT priorities

How does it work?
The lines you purchase with Lingo are actually hosted in the cloud and can now be used across all of your devices and locations interchangeably, allowing you to only pay for what you need! This is the perfect for solution for any business with one or multiple locations that doesn't require all of their personnel to be on the phone at the same time. And we've simplified it even further with the most straightforward pricing ever!
