

Cloud SIP Trunking

Enterprise-grade PSTN connectivity. Simple, easy setup.

SIP Trunking - Scalable for your growing business needs

SIP is a robust digital solution that delivers high quality voice and data service. Using dynamic bandwidth allocation, Lingo amplifies the capabilities of SIP, allowing for on-demand paths which can be used for calling and unified communication features..

Why businesses love Cloud SIP Trunking

Scalable Voice

Easily add trunks, channels, and DIDs as you grow.

Cloud Redundancy

Cloud data centers give you superior call reliability.

Flexible pricing

SIP trunk pricing that saves you more on business voice.

Call Origination

Lingo SIP Trunking includes PSTN origination, which is the routing of inbound calls destined for customer DIDs from the PSTN to the customer voice equipment. Lingo SIP Trunking customers must order DIDs as add-ons (see DIDs below) to receive inbound calls via their SIP Trunks..

Call Termination

Lingo SIP Trunking includes PSTN termination, which is the routing of outbound calls from the customer voice equipment to the PSTN. PSTN termination encompasses several potential traffic types, including local, domestic LD, international LD, and special services.

- Free Cloud IP to IP calling
- Unlimited local calls
Competitive LD, International & Toll-Free rates
- Codecs G.711 and G.729 available
- BYOB (Bring Your Own Bandwidth)
- One DID per channel
